\*\*\* Notes of Significance \*\*\*

Fires highlighted in yellow have submitted a final ICS-209

## Evening Brief

Date Stamp: Monday July 10, 2017

---

### Weather Summary

**...HIGH RISK for Scattered Monsoonal Thunderstorms Sunday...**

**...Gusty Winds and Low RH Western Nevada Sun-Mon...**

Hot temperatures will continue through the weekend across the Great Basin under strong high pressure with most valleys approaching or exceeding 100 degrees.

Monsoon moisture continues across the Great Basin producing isolated to scattered thunderstorms across much of the region again today. Storms will be a mix of wet and dry and be faster moving on the western side of the ridge across Nevada and Idaho. Deeper moisture will work its way into Utah through early this coming week with better chances of more widespread wetter storms.

We have issued **High Risk** for much across northeastern Nevada and northwest Utah today. Storms further south and east will likely transition to wet, along with an increase in humidity.

Drier air will move into Western and Northern Nevada into Southwest Idaho Sunday, and push into central Nevada by mid-week. Drier air may eventually work its way east into Western Utah later next week. Therefore, the deeper moisture in the Great Basin may only last for a prolonged period over Southern and Eastern Utah.

Southwest winds will be increasing along the Sierra Front Sunday and spread further east into Northwest and Northern Nevada into Southwest Idaho on Monday with low RH. Wind gusts 30-40 mph are expected and **High Risk** has been issued for some of these areas Sun/Mon.

### Great Basin Fire Potential Summary

Fine fuels, which have been the main contributor to fire spread early this season in the north and west, continue to dry out quickly across the Great Basin. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs have now climbed to the 90th-97th percentile over southern and eastern NV/UT and the AZ Strip and are **near record highs in some areas**, with more advanced fire behavior on ongoing fires in southern Utah.

Further north ERCs also continue to increase and dry out...mostly in the 60th to 70th percentile with a few drier pockets. Sagebrush live fuel moisture is still near normal across the northern and western portions of the Great Basin, but is on the downward trend. Sagebrush live fuel moisture across

Central/Southern NV/Utah has dropped significantly to below normal and in some areas is approaching record lows.

Towards the end of the 7-Day period, we do expect to see some moistening of fuels, especially in southern and eastern Utah where we could see a return to the "Moist" category.

## Resources:

- Crews: 16 T1 IHCs in GB: 13 committed, 3 on R&R.
- T1 IMT Team 2 - Demob
- T2 IMT Team 6 – Chadwick committed to Earthstone fire.
- T2 IMT Team 7 – DeMasters committed to Brianhead fire.
- T2 IMT Team 3 – Rohrer committed to Draw fire.
- T3 IMT Thaler committed to Dry Gulch fire.
- T3 IMT Hecht committed to Roosters Comb.
- Local IA resources are at drawdown for UT and NV.
- GBCC has committed an estimated 142+ type 3, 4, 6 engines.
- 0-T1 and 0-T2 helicopters are available in GACC.

## Great Basin Fire Activity (from Irwin): Moderate Activity

**New Fires and Acres: 44 fires for 38,489 acres. 23,420 acres large fire growth.**

## Current Incident Details Todays Activity (from WFDSS):
